

MOHANAD ASHRAF SHERBY

Senior DevOps Engineer | AWS • Kubernetes • Terraform • GitOps • Cloud Security

+20 109 927 9724 | mohanadsherby@gmail.com | linkedin.com/in/mohanadsherby | Cairo, Egypt

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years owning AWS and Kubernetes (EKS) platforms end to end, from infrastructure design through production operations. Designed and led the delivery platform for 12+ microservices and legacy applications powering an e-commerce/retail platform across 3 environments, standardising Terraform/Ansible provisioning, Jenkins CI and Argo CD/Flux GitOps delivery. A CNCF **Kubestronaut** — holder of all five Kubernetes certifications (CKA, CKAD, CKS, KCSA, KCNA) — with a track record of embedding security scanning, WAF policies and observability into the pipeline rather than bolting them on afterwards. Acts as the technical point of contact for infrastructure decisions, production incidents and cost optimisation.

KEY ACHIEVEMENTS

- Reduced release lead time from **~1 day to under 15 minutes** by designing a standardised Jenkins → Nexus/Artifactory → Argo CD pipeline reused across 12+ services.
- Cut monthly AWS spend by **~25% (≈ \$1,800/month)** through right-sizing, Auto Scaling policies and storage lifecycle changes identified via CloudWatch and Datadog analysis.
- Eliminated configuration drift across **3 environments** by moving all deployments to GitOps with automated sync, self-healing and pruning.
- Achieved **~70% reduction** in critical CVEs reaching production by integrating Trivy, SonarQube and Checkmarx as blocking pipeline gates.
- Brought a legacy monolith under automated deployment with Ansible dynamic inventory, removing **~6 hours** of manual release work per cycle.

CORE COMPETENCIES

Cloud (AWS): EKS, EC2, VPC, IAM, S3, ECR, RDS, Redshift, ELB/ALB/NLB, Auto Scaling, Route 53, CloudWatch, WAF, GuardDuty, Inspector

Kubernetes & GitOps: Kubernetes (CKA, CKAD, CKS), Helm, Argo CD, Flux, Docker, Docker Compose, cluster hardening, RBAC, network policies

Infrastructure as Code & CI/CD: Terraform, Ansible, Jenkins, Git, Maven, Nexus Repository, JFrog Artifactory

Observability: Prometheus, Grafana, Datadog, CloudWatch

Security: Trivy, SonarQube, Checkmarx, Cloudflare WAF, AWS WAF, secrets management, supply-chain scanning

Systems & Languages: Linux and Windows Server administration, Python, Bash, Go

PROFESSIONAL EXPERIENCE

DevOps Engineer | Digitize Code

2023 – Present

Own the cloud infrastructure and delivery platform for 12+ production microservices powering an e-commerce/retail platform serving 10,000+ users.

- Architected and provisioned AWS environments (EKS, VPC, RDS, Redshift, ALB/NLB) with Terraform and Ansible, standardising 3 environments and removing manual setup from the onboarding path.
- Designed the CI/CD platform on Jenkins: automated packaging, container builds, semantic image versioning and artifact publishing to Nexus and JFrog Artifactory, with environment-specific config updated automatically for full release traceability.
- Led the migration to GitOps with Argo CD and Flux, introducing automated sync, pruning of obsolete resources and drift recovery; 12+ services now deploy without manual kubectl access.

- Built a reusable Helm chart library covering registry auth, health probes, resource requests/limits and app configuration, adopted as the standard for all new services.
- Embedded security into delivery: Trivy image scanning, SonarQube and Checkmarx quality/SAST gates, and credential management for SCM and registry access. Implemented Cloudflare and AWS WAF rules, rate limiting and access policies protecting 15+ public endpoints.
- Established the observability stack (Prometheus, Grafana, Datadog, CloudWatch) with alerting and dashboards used for capacity planning and cost reviews.
- Primary responder for production incidents: root-caused 10+ P1/P2 incidents through log and metric analysis, and supported security investigations; contributed to a ~35% improvement in MTTR.
- Automated deployment of legacy services with Ansible dynamic inventory, integrating configuration and monitoring setup so legacy and containerised workloads share one release process.

CERTIFICATIONS

Kubestronaut – CNCF Kubestronaut	Credential ID: d26789fb-24fa-410b-a7a2-da7db76b094d
CKS – Certified Kubernetes Security Specialist	Credential ID: LF-1yf0hfbchb
CKA – Certified Kubernetes Administrator	Credential ID: LF-cv3olutlgx
CKAD – Certified Kubernetes Application Developer	Credential ID: LF-u1rux3jn81
KCSA – Kubernetes and Cloud Native Security Associate	Credential ID: LF-42iv33e4ex
KCNA – Kubernetes and Cloud Native Associate	Credential ID: LF-nq42o7rlvt

EDUCATION

Bachelor of Engineering Arab Academy for Science, Technology & Maritime Transport, Cairo	July 2023
